IMPORTANT SAFETY INFORMATION

COMMERCIAL STATEMENT

Recent upgrades to safety policy regarding installation of electronic gate automation systems have been implemented. These include risk assessing, force testing, CE marking, declaration of conformity, documenting and the installation of adequate safety devices is now law. Beforehand it was a recommendation. This is without exception from small domestic to high security commercial installations. Any company not providing this is breaking the law. Anyone thinking of installing a gate automation system should only use a company that provides this service.

As a responsible company we work to the British Standard Machinery Directives Umbrella EN13241-1 which encompasses EN12453, EN12445 EN12978 and EN1760-2 regulating the safe installation practices of automatic gates. We only manufacture and install to the highest standard and as such are only willing to use the best equipment for the job. This ensures our reputation and provides you the customer with a top quality, reliable, and above all safe and compliant installation.

All gate automation systems must be maintained by a reputable gate automation company. The system must be force tested and documented. 30 Force tests will be carried out on each system installed. The documentation produced will be provided to the customer and also must be held by ourselves for 10 years. Any system that fails to comply should be electrically isolated and costs for the upgrade given to the customer. The system cannot be turned back on until the repairs and force testing has been carried out. Any customer switching the system back on without carrying out the repairs and force testing the system, will be breaking the law and fully liable to prosecution by the Health and Safety Executive.

These measures have been put in place by the Health and Safety Executive to safeguard the public and employees from injury.

If you have any question relating to this statement please feel free to contact our office.

Yours sincerely

**Sean Lynch
